SKILLS

Mobile Development

Flutter · Dart · Android SDK
Firebase · State Mgmt
(Provider/Bloc/MVVM)

AI & Automation

LLM Integration
Prompt Engineering
Autonomous AI Agents
Token Optimization

Backend & Databases

Python · Django · DRF
PostgreSQL · SQLite/Drift
Cloud Firestore · Hive

Tools & Concepts

REST APIs · Git · CI/CD
Google Maps API
Serper.dev · TheirStack
Agile

EDUCATION

MSc Information Technology

Strathmore University
May 2025 – Jun 2027 (Expected)

BSc Computer Science

Catholic University of Eastern Africa
Sep 2020 – Oct 2024
Second Class Upper Division

PROFESSIONAL SUMMARY

Innovative Software Engineer specializing in Mobile Development (Flutter/Dart), Backend Architecture (Django/PostgreSQL), and AI Systems. Proven track record of taking products from concept to production, with multiple apps live on the Google Play Store. Highly skilled in building autonomous AI agents that automate complex workflows by integrating LLMs, search APIs, and database logic.

RELEVANT EXPERIENCE

Mobile & Backend Developer · IVY Community

Jan 2025 – Nov 2025

- Architected a cross-platform vendor management system using Flutter and Django, enabling real-time inventory tracking for local vendors.
- Developed a custom Computer Vision Measurement API to extract body metrics from 2D photos for a virtual Fashion System.
- Led R&D on 3D body modeling, prototyping integration with SMPLX to create rotatable 3D avatars for virtual outfit fitting.

Lead Technical Instructor (AI & Mobile)

Independent Training Workshops · Sep 2025 & Feb 2026

- Designed and conducted intensive training on Mobile App Development (Kotlin) and Applied Artificial Intelligence.
- Mentored developers through hands-on workshops on integrating AI LLM endpoints into mobile applications.
- Broke down complex ML and software engineering concepts into digestible, actionable lessons for peers.

Backend Developer · Uasin Gishu County Government

May 2023 – Aug 2023

- Spearheaded development of a Fuel and Repair Order Management System, replacing manual paper processes and reducing turnaround times.
- Integrated Google Maps API to calculate precise fuel quota distances, directly mitigating fuel theft.
- Managed a PostgreSQL schema handling complex departmental relations.

KEY PROJECTS & AI SYSTEMS

Autonomous AI Agents: "Atlas" & B2B Lead Gen

Python · PostgreSQL · Serper API · TheirStack · LLMs

- Engineered "Atlas", an autonomous AI agent that ingests job postings via RSS and TheirStack, scores suitability 1–10 against a skills database, and auto-applies for top matches.
- Implemented conditional workflow automation: scores >9 trigger auto-applications, >7 generate tailored drafts—strictly optimizing API token usage.
- Built an outbound B2B sales agent using Serper.dev to discover leads and autonomously draft personalized sales emails.

Stratum [\(Live on Google Play Store\)](#)

Flutter · Dart · Hive · Generative AI

- Engineered a secure local SMS parsing engine that automatically extracts and logs financial transactions using an offline Hive database.
- Integrated Google Generative AI to clean messy merchant names and auto-categorize expenses, enabling zero-friction financial analytics.
- Built real-time dashboards for dynamic budgets and goal-oriented digital piggybanks to track free cash flow.

Number Your Days [\(Live on Google Play Store\)](#)

Flutter · Firebase · AI Integration

- Designed and deployed an advanced journaling app using AI endpoints to analyze text entries for sentiment and psychological patterns.
- Implemented secure cloud syncing via Firebase Firestore with robust user authentication.
